

Project Title: NIRMAYA – A Privacy-First Digital Ecosystem with Samtulan Platform

Team Name: SageStack

Abstract:

In today's rapidly evolving digital world, users are increasingly exposed to harmful, unregulated, and addictive online content. Issues such as cyberbullying, deepfake media, non-consensual imagery, and misleading information have created serious concerns around user safety, privacy, and mental well-being. Existing platforms often prioritize engagement and virality over responsible content delivery, leading to the amplification of harmful content and unhealthy digital consumption patterns.

To address these challenges, we present **NIRMAYA**, a privacy-first digital ecosystem designed to ensure safe, ethical, and balanced content consumption. At the core of NIRMAYA lies **Samtulan**, a structured content platform that enables controlled publishing and secure digital interaction for users.

Samtulan operates on a **role-based content system**, where creators submit content through a regulated pipeline. The platform integrates a **dual-layer moderation mechanism**, combining AI-based analysis with human verification. The AI layer analyzes content for harmful elements such as toxic language, inappropriate material, and misinformation, while human moderators ensure contextual accuracy and ethical compliance. This hybrid approach ensures that only verified, safe, and meaningful content is delivered to users.

Unlike traditional platforms, NIRMAYA eliminates addictive design patterns such as infinite scrolling and algorithm-driven content manipulation. Instead, it promotes a **user-controlled, distraction-free experience**, encouraging mindful engagement and reducing digital dependency.

Technically, the system is built using modern web technologies including React.js, Node.js, and MongoDB, enabling scalability, efficient data handling, and real-time content moderation.

By combining advanced technology with responsible design principles, NIRMAYA aims to redefine digital platforms by prioritizing user safety, privacy, and well-being. The solution envisions a future where users can interact with digital content in a secure, transparent, and balanced environment.
