WHAT PROBLEM ARE WE SOLVING? The significant communication barrier between the Deaf community (native ISL users) and the hearing community in India.

Reliance on interpreters in spontaneous or casual settings, **PAIN POINTS FOR USERS** which restricts direct, personal communication and limits inclusion in public and social spaces.

REAL-WORLD RELEVANCE Indian Sign Language (ISL) is a distinct, fully-fledged natural language with its own grammar. The lack of instantaneous, portable translation technology limits the independence and inclusion for ISL users across various sectors.

VEDATHON

SageStack

Signlynk is a pioneering, wearable technology (a smart glove) designed to translate Indian Sign Language (ISL) hand gestures into spoken Indian languages (e.g., Hindi/English) in real-time.

Creating an instant, accessible bridge to facilitate direct communication between ISL users and non-signing individuals.

A low-latency system relying on flexible sensors in a glove, wireless transmission, and custom algorithms for matching ISL gestures to speech output.

VEDATHON

Real-time ISL-to-Speech Conversion: Instant translation of ISL hand gestures into clear, synthesized speech.

High-Fidelity Gesture Capture: Integrated strain and flex sensors capture minute changes in finger and hand movement, critical for complex ISL signs.

Wireless and Low-Latency: Data is instantly transmitted via low-energy Bluetooth to a paired mobile device, minimizing delay between signing and verbal output.

Ergonomic & Discreet Design: Lightweight, comfortable, and intended to be worn for extended periods without hindering natural signing movements (similar to a daily accessory)

- **Value Created (Social Impact):** Empowers the Deaf community by facilitating direct communication in daily life, promoting a more inclusive society.

Design Philosophy: Fits into a growing category of personal assistive technologies designed for constant, discreet use (similar to Hearing Aids or Contact Lenses).

Independence: Removes the reliance on an interpreter in casual, spontaneous settings, providing greater autonomy.
